

Announcement of the annual meeting of the “European Thermoelectric Society” ETS in 2019

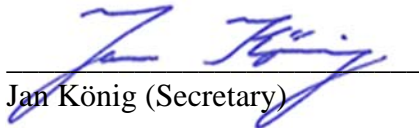

The annual meeting of the *European Thermoelectric Society* (ETS) will take place at the 17th European Conference on Thermoelectrics ECT2019, to be held in Limassol / Cyprus, September 23-25, 2019.

The topics of the annual meeting of the European Thermoelectric Society will be

1. Opening and greeting
2. ETS Board Elections
3. Activity report of the board
4. ETS Affairs and announcements
5. Applications
6. Miscellaneous

Any applications can be proposed to Jan König (jan.koenig@ipm.fraunhofer.de) until August 26, 2019.

On behalf of the executive ETS board

Jan König (Secretary)

European Thermoelectric Society

The European Thermoelectric Society (ETS) is a non-profit scientific association, founded in 1995 as a regional organization of the International Thermoelectric Society (ITS). The ETS aims to represent the interests of everyone involved in thermoelectricity. It offers a platform to the thermoelectric community to improve exchange of information and pool resources. On the other hand it acts as a single point of contact for economy, politics, and the interested public. It is committed to watch trends, give directions for future activities, develop visions, and render guidance to those interested in the field. An important function is to raise awareness of thermoelectricity and its applications in Europe.

In order to live up to these purposes, the ETS award organizations to host conferences in topics of interest to the community and establishes a communication network between members. In addition, the ETS is in close contact to other thermoelectric groups and societies in Europe and worldwide. The ETS Board review and award organizations hosting the annual “European Conference on Thermoelectrics (ECT)”.

The ETS membership is open to individual persons with interest in thermoelectricity from industry or academia. Registration for the annual "European Conference on Thermoelectrics" automatically involves a one-year ETS membership. The ETS members can vote the nominated board members (see the separate call for board members). Board members are elected for a three-year term and are expected to play an active role in the European Thermoelectric Society. Both the Executive and the Extended Committee called “ETS Board” conduct the affairs of the society.
